

Chakravarty Dara

Chicago, IL | cwork815@gmail.com | H1B

PROFESSIONAL SUMMARY

Lead / Staff UI Engineer with **12+ years of professional full-stack and frontend experience** specializing in financial and banking product development. Proven track record architecting high-performance **micro-frontend** platforms and driving **AI-first product engineering** across elite FinTech, healthcare marketplace, and enterprise sectors. **Certified SAFe® Agilist** and technical multiplier who seamlessly blends hands-on execution, including building open-source AI agents with strategic architectural oversight, cross-functional collaboration, and team mentorship.

- **AI-native Engineering:** Copilot, Claude Code, and agentic frameworks for component generation, testing, workflow automation, and developer productivity

EDUCATION

Master of Information Technology & Management

Dec 2017

ILLINOIS INSTITUTE OF TECHNOLOGY, Chicago, IL, USA.

Master's Degree Courses: Data Analytics (AI/ML), Front-End Web Development, Human Computer Interaction, Business Innovation, Technology Consulting for Professional, Advance Topics in Data Management, Open-source Operating System (Linux), Advanced Software Programming (Java), Data Networks and Internet Architecture, ITIL and COBIT.

Bachelor of Technology in Electronics & Communication Engineering

May 2011

Jawaharlal Nehru Technological University, Hyderabad, India.

TECHNICAL & LEADERSHIP SKILLS

- **AI, Agentic Productivity:** GitHub Copilot, Claude Code, LangChain AI Agent Framework, MCP Server, Python, LLM, Context Optimization, Prompt Engineering.
- **Frontend Ecosystem:** Angular, React, TypeScript, JavaScript, Next.js, RxJS, HTML5, CSS3, SASS, Tailwind CSS, NPM, D3.js, AG Grid, Highcharts, Storybook, Figma, Enterprise UI Design Systems, VS Code.
- **Architecture & Backend:** Micro-frontends, Microservices, Node.js, GraphQL, RESTful APIs, WebSockets, MongoDB, SQL, MS SQL Server, Oracle, PlainID Authorization, OAuth.
- **Cloud & DevOps:** AWS, Google Cloud, MS Azure, Jenkins, BitBucket, Git, Kibana, Docker, Kubernetes, JIRA. Confluence.
- **Methodologies & Leadership:** Technical Program Delivery, Engineering Mentorship & Coaching, Agile (Scrum/Kanban), Vendor Management, Cross-Functional teams product delivery.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer (Lead UI Engineer)

Sep 2023 – Apr 2026

FREDDIE MAC (client), McLean, VA

- **Strategic UI Architecture:** Developed and engineered the foundational UI architecture from scratch for mission-critical financial web modules including **Deal Summary, Market Valuation, Reserves, Fees & Payments, Credit Enhancements, Appraisals**, enabling enterprise-scale U.S. mortgage loan processing workflows.
- **Enterprise Modernization:** Spearheaded the development of multiple core micro-frontend applications using Angular, TypeScript and UI tools, implementing advanced reactive patterns, establishing reusable UI component standards via Storybook, and dramatically improving long-term application maintainability.
- **AI-augmented Engineering:** Championed enterprise AI-assisted development initiatives using GitHub Copilot and Cursor, engineering context-rich prompt strategies to automate boilerplate code, streamline testing loops, and accelerate development velocity across UI squads.
- **Security & Governance:** Collaborated with security stakeholders to architect Policy-Based Access Control (PBAC) solutions utilizing PlainID authentication, ensuring compliant and secure user access governance mapped dynamically to user personas, loan phases, and underwriting rules.
- **User Experience Optimization:** Partnered with UX/UI design teams to heavily optimize platform user flows for high-visibility micro-frontends like *Loan Summary* and *Market Property Valuation*, drastically reducing friction for enterprise underwriting specialists.
- **Engineering Leadership & Delivery:** Successfully developed multiple micro-frontends and delivered the **myOptigo® platform** for its on-time enterprise-wide **production launch** following 2.6 years of MVP development, collaborating across Product, QA, and Loan Lifecycle teams to achieve critical first-loan processing milestones.
- **Cross-Functional Delivery Leadership:** Coordinated engineering execution, release activities, and critical dependency tracking across multiple teams and distributed pods using Agile methodologies, JIRA, and ServiceNow driven deployment workflows.
- **Requirements Transformation:** Acted as the primary technical advisor to Product Owners and underwriting Subject Matter Experts (SME), translating intricate loan-processing business rules into scalable, high-performance frontend technical specifications.
- **Risk Management & Mitigation:** Facilitated cross-team technical planning and architecture alignment reviews, proactively identifying delivery roadblocks and technical debt to optimize sprint velocity and protect production release timelines.
- **Technical Mentorship:** Led dedicated technical mentorship and code review sessions for frontend engineers, instilling clean-code design patterns, and software engineering best practices.

Senior Consultant (Senior Software Engineer)

Sep 2019 – May 2023

CGI, Inc., USA

Major Client: Deutsche Bank | Raleigh, NC.

Led frontend engineering for enterprise-scale **Securities Lending Trading Desk Internal App** and **Corporate Actions** platforms supporting high-volume institutional trading and securities transactions.

- Led frontend engineering for enterprise-scale **Trading** and **Corporate Actions** platforms using **Angular** and **React** within **distributed microservices** based financial systems.
- **Architected** and implemented complex Angular applications with modular component design, lazy loading, advanced routing, route guards, and reusable shared libraries.
- **Designed** and **developed** sophisticated **UI workflows** for proprietary trading data, Corporate Actions, Events, and Elections supporting both institutional and retail banking users.
- Built reusable Angular services and **RESTful API** integration layers to manage application state, perform **CRUD** operations, and communicate with Deutsche Bank's enterprise backend services.
- Developed **scalable** frontend architecture focused on maintainability, performance optimization, and **reusable** component development across multiple applications.
- **Led UI technical backlog refinement**, feature estimation, sprint planning, and architectural discussions with product owners and distributed engineering teams.
- **Mentored** frontend developers, established Angular best practices, and conducted code reviews to improve code quality and maintainability.
- Collaborated closely with UX designers, backend engineers, QA teams, and **business stakeholders** throughout **Agile** development cycles.
- **Automated CI/CD pipelines** using Jenkins and Docker, enabling consistent build, deployment, and **production release** processes.
- Developed analytical dashboards using Tableau by integrating Oracle and MariaDB data sources on AWS, creating advanced SQL queries using joins and window functions for reporting and operational insights.
- Contributed to performance optimization, defect reduction, and continuous delivery of mission-critical financial applications.

Client: Connect for Health Colorado | Denver, CO.

Developed consumer-facing healthcare plans marketplace applications supporting Colorado's state health insurance enrollment platform.

- Developed responsive accessible web applications from scratch using **UX wireframes** using **Angular**, HTML5, CSS3, and TypeScript.
- Built healthcare marketplace shopping experiences with advanced **search, filtering, pagination, and dynamic routing** capabilities.
- Integrated Angular applications with **REST APIs**, secured through **Okta authentication** and authorization.
- Implemented reusable Angular components, **services, route guards, and state management** patterns to improve maintainability and scalability.

- Established **CI/CD** pipelines using Jenkins, Docker, and Kubernetes for automated build, deployment, and release management.
- Increased application reliability by implementing comprehensive **unit testing** using Jasmine and Karma with strong code coverage.
- Partnered with **cross-functional teams** including UX, QA, backend engineering, and product management to deliver high-quality releases in Agile environments.

Senior Data Specialist

Apr 2018 – May 2019

Transcontinental Fund Administration, Chicago, IL

Worked with hedge fund managers, Big 4 auditors, and financial institutions

- Led **investor reporting platform workflows** for hedge fund and venture capital clients, enabling **real-time financial reporting**, portfolio analytics, and investor-facing dashboards for fund administration operations.
- Owned end-to-end investor reporting and **client-facing** financial operations including quarterly reporting, fund inception documentation, bank statement analysis, and regulatory financial disclosures as Client Relationship Manager working directly with fund managers and fund owners.
- Enhanced investor reporting portal by implementing **automated K-1 data processing**, upload workflows, and distribution pipelines, enabling **secure investor access and download** of K-1 tax documents via the reporting platform.
- Collaborated with **Big 4 audit and tax firms** on validation of tax-related financial documentation to ensure **compliance and data accuracy** of fund reporting processes.
- Developed **quarterly investor presentation** decks for fund manager meetings, summarizing NAV performance, capital activity, and **portfolio analytics data** for executive and **stakeholder reviews**.
- Built and evaluated data visualization POC using Bloomberg Terminal and Yardi analytics-sourced financial data, delivering **scalable reporting insights** through Excel dashboards and PDF-based financial reports.

Software Developer (Full Stack Engineer)

Oct 2011 – July 2015

COGNIZANT, Hyderabad, India

Client: Lightspeed Research | Warren, NJ

- Developed **full-stack modules** for **Consumer Say** web and mobile application, including registration, profile management, rewards, and survey workflows using **Java, WebQL, HTML5/XHTML, CSS3, JavaScript, jQuery, AJAX, RESTful Web Services, and JSON**, integrating with enterprise backend APIs serving North American banking data systems.

- Built interactive UI features such as **auto-complete, auto-suggest, and role-based dynamic navigation menus**, using **JavaScript, jQuery, and Web Services integration**, enhancing user experience and personalization.
- Designed and maintained **front-end framework, layout architecture, and reusable UI components** across portal systems, ensuring consistency across web and mobile interfaces.
- Supported backend data operations and reporting workflows through **SQL queries on MySQL and Java-based service integrations**, enabling structured data exchange and analytics support.
- Collaborated with stakeholders to implement UI requirements, production enhancements, and issue resolution in Agile delivery cycles.

Client: Kantar Worldpanel | London, UK

- Developed and enhanced **Worldpanel Online** full-stack **data visualization and market research applications** using **Java, JavaScript, HTML, CSS, jQuery, and SQL Server**, supporting statistical analysis and global reporting systems.
- Built and maintained **UI components, styling systems, and cross-browser compatible interfaces**, ensuring consistent rendering across enterprise-supported environments.
- Participated in Agile ceremonies including **weekly stand-ups, release planning, and quarterly production deployments**, coordinating with global engineering and product teams.
- Investigated and resolved **production defects across APAC and Europe regions**, performing **root cause analysis and UI/data troubleshooting for visualization and reporting systems**.
- Maintained and updated **CSS style guides, UI documentation, and release standards**, ensuring consistency across quarterly production releases.
- Developed SQL-based data extraction and monitoring solutions supporting **data visualization pipelines and OLAP reporting systems**, improving system reliability and analytics accuracy.

CORE COMPETENCIES

AI-augmented Engineering: Generative AI, AI agents, MCP Server, LLM-based workflows, and developer productivity optimization.

Frontend Architecture & Platform Engineering: Scalable UI systems (React/Angular), micro-frontends, design systems, and performance-focused frontend engineering.

Engineering Leadership: Cross-functional technical leadership, system ownership, roadmap execution, stakeholder alignment, and Agile delivery at scale.

CERTIFICATIONS

SAFe® Agilist – Scaled Agile Framework (2022) | PMP Training – Skillsoft (2022)

LinkedIn- Prep Certified Scrum Master (2019) | Master Python for Data Science (2019)
